# Valor RMS

Valor RMS consists of several individual modules that combine to provide scalability, configurability and buildability. It incorporates user-defined fields (UDF's) to handle varying state and local requirements such as UCR and NIBRS. You may indicate mandatory fields in an effort to streamline the submittal and approval process. The mandatory fields become highlighted so the user will clearly see what needs to be completed prior to submitting their report.

The Case Management (CM) module of RMS provides investigation and reporting functions. It also provides the means to track the assignment and progress of an investigation.

Select Features

- ✓ All calls for service information entered into the CAD system during the event are automatically transferred into the corresponding fields of the RMS Incident Report.
- ✓ The system allows user defined search filters.
- ✓ The system allows for supplemental photos, videos and other files to be attached as part of the event report.
- ✓ The system has an audit trail for evidence and property (i.e., Chain of Custody).
- ✓ The arrest module features an unlimited amount of charges, an incarceration log, ability to add unlimited images, person details, arrest record, free form narrative with word processing features, an administrative tab, juvenile info tab, and inmate property info.
- ✓ Statistical and Ad-Hoc Reporting.
- ✓ Component Modules:
  - → Event Reporting
  - → Incident / Supplemental Reports
  - → Arrest Reports
  - → Case Management
