

Valor SafeGuard

As an extension of Valor Mobile, Valor SafeGuard brings IMS functionality to handheld devices such as smartphones and tablets. Compatible with all standard operating systems (Windows, MAC, iOS and Android) Valor Mobile empowers individuals to report suspicious activity, activate a Panic button, and receive notifications of area-wide alerts.

Valor SafeGuard was inspired by the Department of Homeland Security's "If You See Something, Say Something®" campaign. This module, working in total integration with the other modules of Valor IMS, offers individuals (e.g., students, visitors, security officers, etc.) the means to summon immediate help or create and send a report of suspicious persons and/or activity to the proper authorities.

Valor SafeGuard helps organizations such as schools and universities, corporate campuses and entertainment venues safeguard their visitors. Individuals using Valor Safeguard can remain anonymous or provide their callback number along with the circumstances that they are reporting.

Valor SafeGuard can work as a standalone reporting system or it can be integrated with the organization's Computer Aided Dispatch system (Valor CAD or third-party) to provide real-time information to first responders and command level staff.
